GOLDFLAME Honeysuckle:

(Name Trade-marked)

A superlative variety; beautiful, hardy and versatile. The large flame-coral trumpets lined with gold, fragrant after nightfall, appear in immense, showy clusters the same year the plant is set out. Reaching its full glory of bloom in early summer, it nevertheless flowers abundantly from May until frost. Dark blue-green foliage, disease and pest free, is attractive in itself and makes a perfect background for the brilliance of the flowers. Allowed to grow naturally, Goldflame will climb a trellis or spread as a ground cover; pruned it becomes a striking specimen shrub, while if planted in a row and sheared it gives a smashing effect as an everblooming hedge.

HETEROPTERIS Glauca:**Red Wing**

A native of South America. One of the most attractive and colorful shrubs in our country. Yellow blossoms in sprays with red seedpods that cling to the stem give a profusion of color the entire summer, regardless of the heat and dry weather. Ideal for use in landscape work where a small flowering shrub is required. Can be trimmed often without affecting its beauty. Fine for cut flower, keeping several days after cut.
